Approvals

FRS 7../6 series are CSA Certified: ANSI Z21.18/CSA 6.3.
FRS 5... series are CSA Certified: ANSI Z21.18/CSA 6.3.

Commonwealth of Massachusetts Approved Product Approval code G1-1107-35

Attention

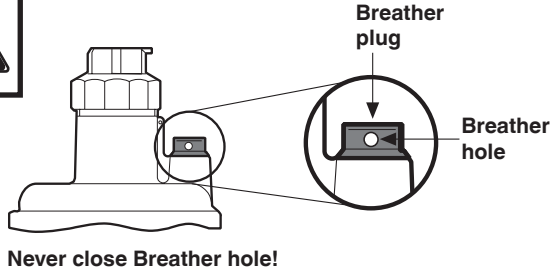
The installation and maintenance of this product must be done under the supervision of an experienced and trained specialist. Never perform work if gas pressure or power is applied, or in the presence of an open flame.

Please read the instruction before installing or operating. Keep the instruction in a safe place. You find the instruction also at www.dungs.com If these instructions are not heeded, the result may be personal injury or damage to property.

Any adjustment and application-specific adjustment values must be made in accordance with the equipment manufacturers instructions.

On completion of work on the pressure regulator, perform a leakage and function test.

This product is intended for installations covered by, but not limited to, the following codes and standards: NFPA 37, NFPA 86, NFPA 54, CSD-1, UL 795, ANSI Z83.4, ANSI Z83.18, ANSI Z21.13, CSA B149.1, CSA B149.3 and CSA B149.6.



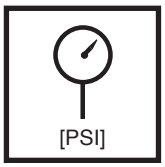
Never close Breather hole!

Explanation of symbols

1, 2, 3 ... = Action
• = Instruction

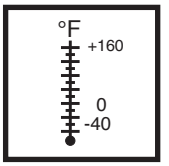
Specification

FRS The FRS series balance type, pressure regulator is a spring-loaded pressure regulator with adjustable setpoint spring and an internal sensor for regulating output pressure.



Max. Operating Pressure (MOP)
7 PSI (500 mbar) for FRS 7../6 series.
10 PSI (680 mbar) for special versions of FRS 7../6 series (see P/N's below).
7 PSI (500 mbar) for FRS 5... Flanged series.
5 PSI (350 mbar) applies to the CSA Certification for FRS 7../6 and for FRS 5... Flanged series.

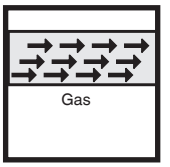
Output pressure range
Adjustable with different springs
1 to 80 in. W.C.



Ambient / Fluid Temperature
FRS 7../6 series:
- +5 °F to +160 °F for up to 7 or 10 PSI, depending on model, for regulating behavior (+/- 10 % of setpoint)
- CSA Certified for -40°F to +160 °F: Diaphragms are suitable for the low temperature, but there may be out of range regulating behavior.

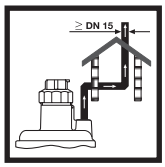
FRS 5... Flanges series:
- +5 °F to +160 °F (-15 °C to +70 °C) for up to 7 PSI.

Maximum pressure drop and gas velocity
The maximum pressure drop is limited by the celocity of the gas. Do not exceed a gas velocity of 30 meters/s.



Gases
Dry, natural gas, propane, butane; other noncorrosive gases. Suitable for up to 0.1% by volume, dry H_2S. A "dry" gas has a dew point lower than +15 °F and its relative humidity is less than 60 %.

Materials in contact with Gas
Housing: Aluminum & Steel
Seals & Diaphragm: NBR-based rubber.



Vent Limiting Device and Vent Line Connection
The FRS/6 has an internal, factory installed vent limiter, which limits the escape of gas to less than 0.5 CFH @ 5 PSI in case atmospheric diaphragm ruptures. Vent limiting device also complies with EN 88-1 & ISO 23551-2. Venting required unless otherwise accepted by the authority having jurisdiction.

Droop and Hysteresis
Hysteresis is less than 10 % for up to 7 PSI inlet.
Average droop at 20:1 turndown is 10 % for up to 7 PSI.

Lock-up Rating
- The FRS meets the ANSI Z.21.80/ CSA 6.22 as Class I, which allows lockup rating not more than 150 % or 5 in. W.C, whichever is greater.
- The FRS meets EN 88-1 as SG30, which allows lock-up as high as +30 % of the outlet pressure.
- See Lock-up Pressure Parameters on page 3 for more details.

Lock-up Pressure Parameters

Per ANSI Z21.80, lock-up is defined as an outlet pressure not more than 150 % or 5 in. W.C, whichever is greater, above the setpoint after a downstream safety shutoff valve closes with 2 seconds, and the two following conditions exists:

1. outlet pressure is set to the highest set point of the spring, and
2. the regulator is set to maximum capacity or flow at which the regulator will control lockup pressure within the acceptable limits.

This means that in a given application, a lockup greater than 150 % or 5 in. W.C could occur, depending out the inlet pressure, the outlet pressure of the regulator, the flow rate of the regulator, and the pipe volume downstream the regulator and upstream the safety shutoff valve.

Per DUNGS, lock-up is +30 % of the outlet pressure setting after downstream shutoff valve slowly closes within 30 seconds. Therefore, in a given application, a lockup greater than +30 % or 5 in. W.C could occur, depending out the inlet pressure, the outlet pressure of the regulator, the flow rate of the regulator, and the pipe volume downstream the regulator and upstream the safety shutoff valve.

If in a given application the lock-up pressure is too high, employing one or more of the following should reduce the lock-up pressure:

1. Increase the size of the regulator.
2. Increase the pipe volume downstream the regulator and upstream the safety shutoff valve.
3. Decrease the inlet pressure.
4. Decrease the oulet pressure.
5. Reduce the flow rate.
6. Disconnect vent line, if installed.

Regulator Orifice Diameters

Regulator Type	Orifice Diameter (mm)
FRS 705/6	28.0
FRS 707/6	34.0
FRS 710/6	39.0
FRS 712/6	43.5
FRS 715/6	43.5
FRS 720/6	57.5
FRS 725/6	68.0

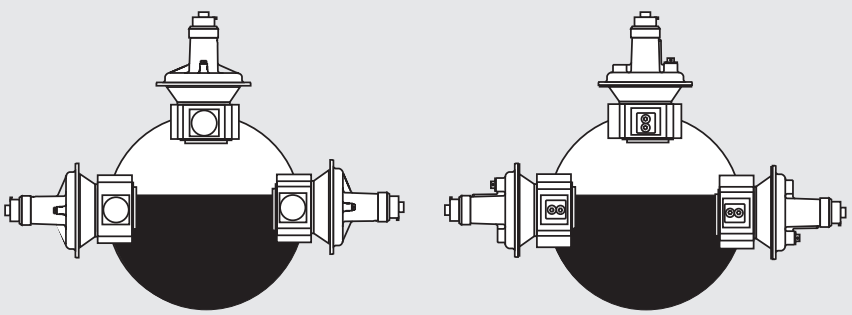
Mounting Preparation

Mounting Preparation FRS 7../6 & FRS 5... Flanged

- The main gas supply must be shut off before starting the installation.
- Carefully examine the unit for shipping damage.
- Remove all dirt and debris before installing.
- Failure to remove dirt/debris could result in damage or improper performance.

Recommended Mounting Procedure

Regulator dome from vertically upright to horizontal



If the flow is not in the same direction of the arrows, the regulator will not operate properly.

Mounting & Installation

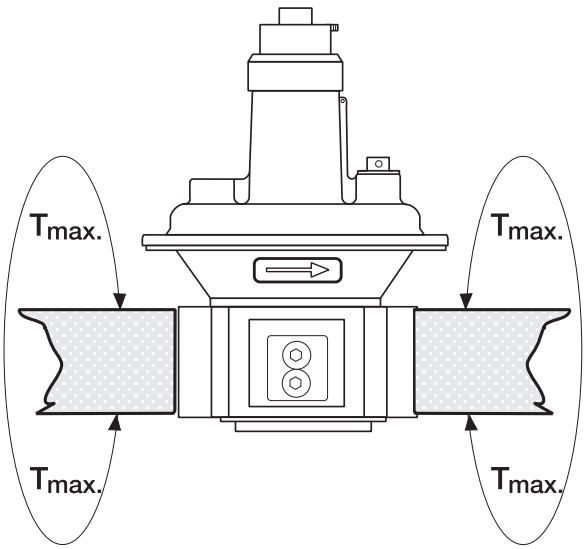
Procedure to Mount the FRS 7../6

- Install the FRS.../6 with the gas flow matching the direction indicated by the arrows on the casting.
- Mount the FRS.../6 with the regulator dome vertical or horizontal.
- Use new, properly reamed and NPT threaded pipe free of chips.
- Apply good quality pipe sealant, putting a moderate amount on the male threads only. If using LP gas, use pipe sealant rated for use with LP gas.
- Do not thread pipe too far. FRS.../6 distortion and/or malfunction may result from excess pipe in the valve body.
- Apply counterpressure with a parallel jaw wrench only to the flats of the FRS.../6 when installing pipe.
- Do not overtighten the pipe. Follow the maximum torque values listed.
- After installation is complete, perform a leak test using a soapy water solution.

⚠ Quickly opening the inlet manual shutoff valve can permanently rupture the internal, balancing diaphragm.

- Install the FRS 5... with the gas flow matching the direction indicated by the arrows on the casting.
- Mount the FRS 5... with the regulator dome vertical or horizontal.
- Insert seal inbetween flanges.
- Insert bolts, tighten in a star pattern to ensure uniform tightness.
- Do not overtighten bolts. Follow the maximum torque values listed.
- After installation is complete, perform a leak test using a soapy water solution.

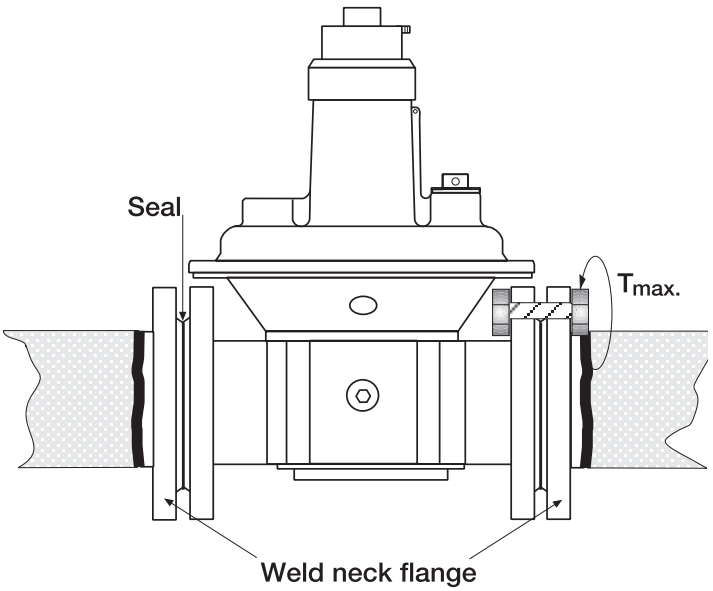
FRS 7../6 Threaded Series



NPT pipe	½”	¾”	1”	1¼”	1½”	2”	2½”	3”
T_{max} [lb-in]	443	560	750	875	940	1190	1310	1310

⚠ Do not overtorque threaded connection or bolts. Permanent damage will occur.

FRS 5... Flanged Series



Bolts: as per DIN 939

T_{max} [lb-in] 443

NOTE: There are no limits for required pipe lengths immediately downstream of the FRS.

⚠ If the flow is not in the same direction as the arrows, the FRS will not operate properly.

Pressure Tap Connections

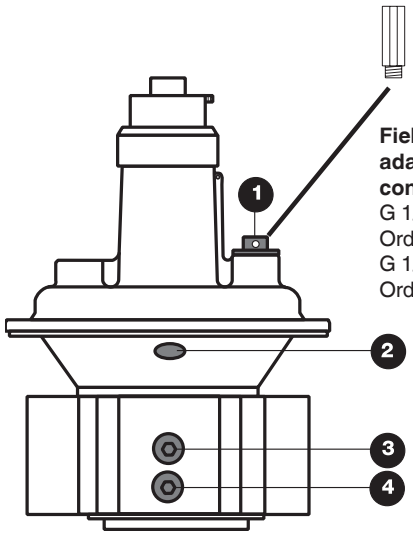
Pressure Taps - FRS 7../6 Threaded Version

1 Vent/breather connection
FRS 705/6 - FRS 710/6, G 1/4 in.
FRS 712/6 - FRS 730/6, G 1/2 in.

2 External feedback pressure connection
FRS 705/6 - FRS 710/6, G 1/4 in. - one side.
FRS 712/6 - FRS 730/6, G 1/4 in. - both sides.

3 Upstream pressure connection
FRS 705/6 - FRS 710/6, 1/4 in. NPT - one side.
FRS 705/6 - FRS 710/6, G 1/4 in. - one side.
FRS 712/6 - FRS 730/6, 1/4 in. NPT - both sides.

4 Downstream pressure connection
FRS 705/6 - FRS 710/6, 1/4 in. NPT - one side.
FRS 712/6 - FRS 730/6 1/4 in. NPT - both sides.



Field mountable adapter for vent connection
G 1/4 to 1/4“ NPT
Order No. 231944
G 1/2 to 1/2“ NPT
Order No. 231945

Pressure Taps - FRS 5... Flanged Version

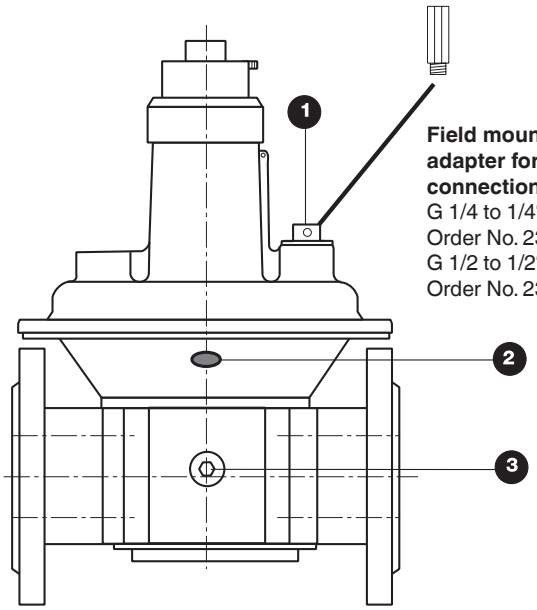
FRS Flanged

1 Vent/breather connection
FRS 5040 - FRS 5150, G 1/2 in.

2 External feedback pressure connection
FRS 5040 - FRS 5150, both sides G 1/4 in.
See caution below.

3 Upstream pressure connection
FRS 5040 - FRS 5150, both sides G 1/4 in.

4 Downstream pressure connection
FRS 5100 - 5125, both sides G 1/4 in.



Field mountable adapter for vent connection
G 1/4 to 1/4“ NPT
Order No. 231944
G 1/2 to 1/2“ NPT
Order No. 231945

When using external feeback pressure connection, the internal feedback tube must be sealed with RTV.

Outlet Pressure Spring Selection

Outlet Pressure Spring Selection (outlet pressure values are for horizontal pipe mounting)
The output pressure is controlled by the force of the adjustable spring. The pressure regulator is supplied with the blue spring No. 4. By exchanging springs, other output pressures can be attained. Subtract 1"W.C. when mounted vertically.

Spring Range (W.C.) Spring color	1 to 3.6 brown Not CSA	2 to 5 white	2.8 to 8 orange	4 to 12 blue Standard	10 to 22 red	12 to 28 yellow	24 to 40 black	40 to 60 pink	60 to 80 grey Not CSA

FRS 5150	229909	229910	229911	229912		229914	229915	229916	243417

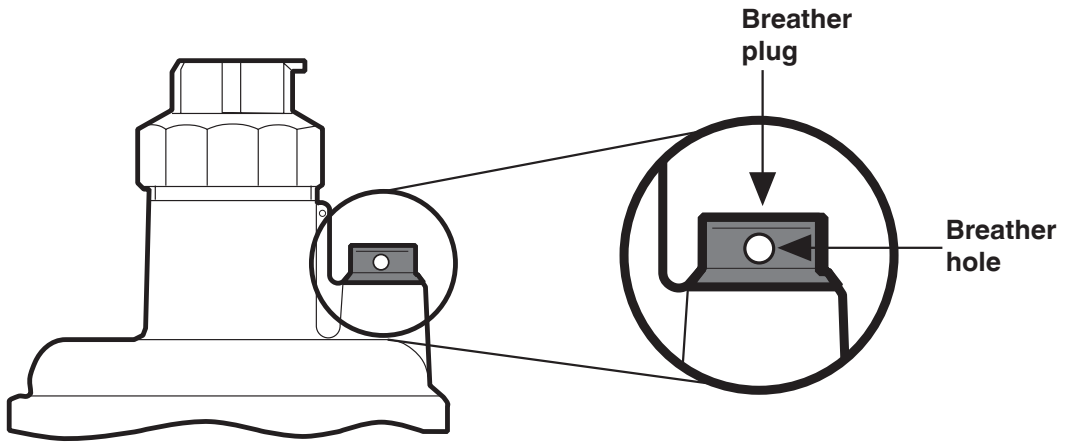
Breather Plug

- All FRS's have a breather plug that threads into the regulators's vent connection.

Do not removed plastic breather plug unless venting outdoors is required.

This plug is not the vent limiter, and it prevents debris from entering the upper chamber of the regulator. Debris in the upper chamber of the regulator could adversly affect regulator performance.

- The FRS regulator must also be able to exchange air through the breather hole in order to properly regulate. Do not plug the breather hole. Clear out if necessary.



Vent Limiting Device & Vent Line Connection

Vent Limiting Device

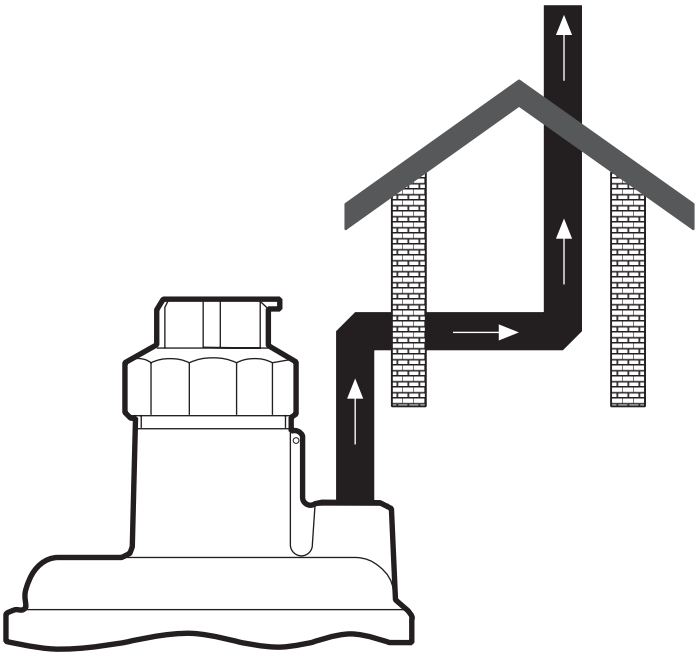
The FRS/6 series regulator contains an internal, factory installed vent limiting device, which limits the escape of gas to less than 0.5 CFH @ 5 PSI in case atmospheric diaphragm ruptures. Venting required unless accepted by the authority having jurisdiction.

Vent Line Requirements

- Follow the local code for vent sizing and termination requirements. In the absence of local codes, follow National Fuel Gas Code NFPA 54, the International Fuel Gas Code or the CSA B149.1 installation code for venting requirements.
- Terminate the vent to an approved location.
- At the point of termination, the vent line must be protected from insects and water intrusion. It is highly recommend to install an insect screen and terminate the pipe with the exit facing downwards to prevent rain water from entering. **NOTE:** For appliances using direct spark ignition, DUNGS recommends using the FRS's factory installed, internal vent limiting device rather than installing a vent line.Vent lines can cause resistance or even feedback pressures that increase the lock-up pressure, potentially leading to hard light-offs or even damaging the appliance.

Installation Procedure

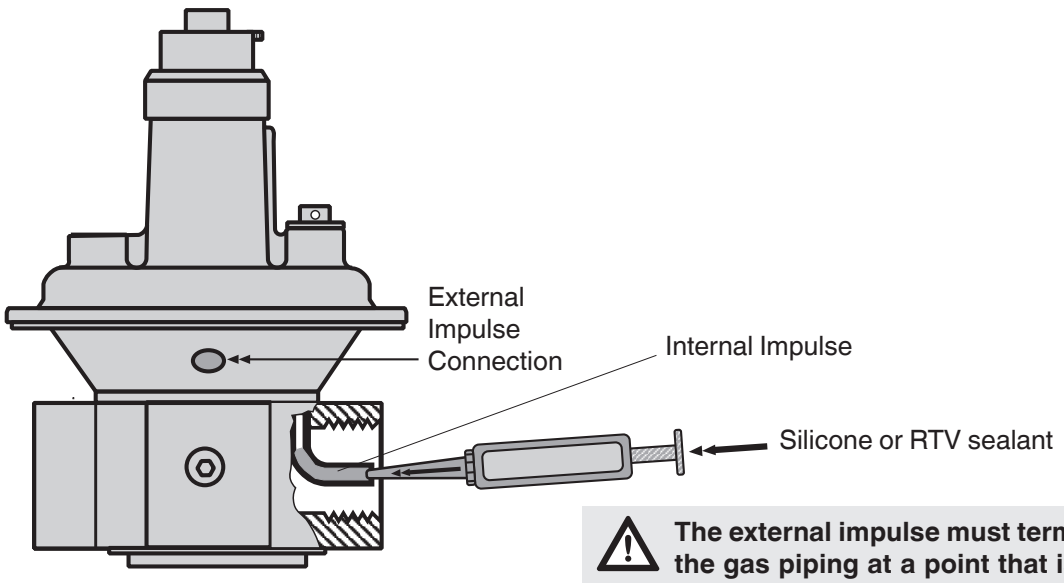
- If venting the regulator, the vent line is to be connected to the upper dome of the FRS regulator as illustrated.
- Remove the beather plug.
- On indoor installations requiring venting outdoors, run the piping as short and as direct as possible.
- The vent connecton is G 1/4 for FRS 705/6 to FRS 710/6 and G 1/2 for FRS 712/6 to FRS 730/6 and for all ISO flanged regulators. G 1/4 to 1/4"NPT adapters are available: (Order No. 231944) and G 1/2 to 1/2 NPT (Order No. 231945).



⚠ In the absence of venting codes and where venting is required, each regulator must be vented separately from all other vents.

External Impulse

- When it is desirable to use the external impluse as the feedback for the regulator, the internal impluse must be plugged. Seal the interal impulse connection with a silicone or RTV sealant suitable for exposure to natural gas, propane, or butane.
- The external impulse must be properly terminated and made of a durable, metal material that is suitable for gas service.

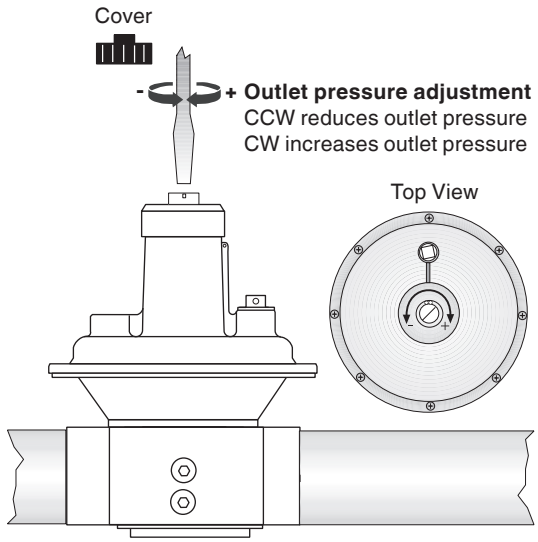


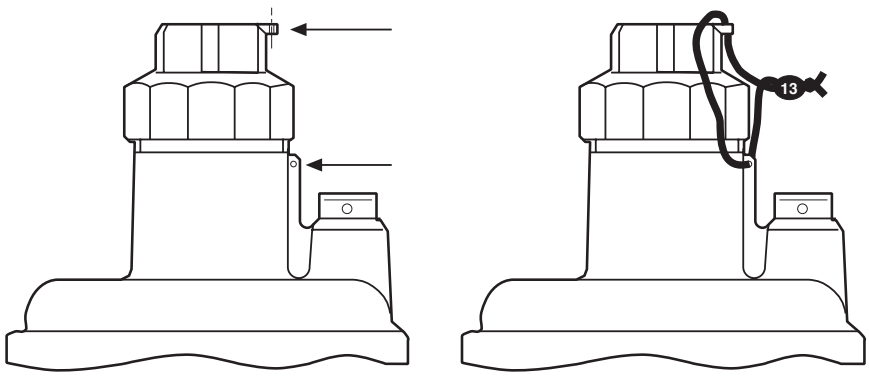
⚠ The external impulse must terminate back into the gas piping at a point that is upstream two safety shutoff valves in series.

Outlet Pressure Adjustment

Adjusting the FRS outlet pressure

1. Verify that the intended output pressure is within the spring range that is installed in the regulator by comparing the colored outlet pressure label with the table on page 6.
2. Remove the black cover.
3. To increase outlet pressure, turn the adjustment spindle clockwise. To decrease the outlet pressure, turn the adjustment spindle counterclockwise.
4. Always use an accurate pressure gauge connected downstream of the regulator to measure the actual outlet pressure as the FRS is mounted in the operating position.
5. Reinstall the black adjustment cover.
6. To prevent unauthorized adjustment, holes in the black cover and the side of the regulator can be used to secure a lead seal.

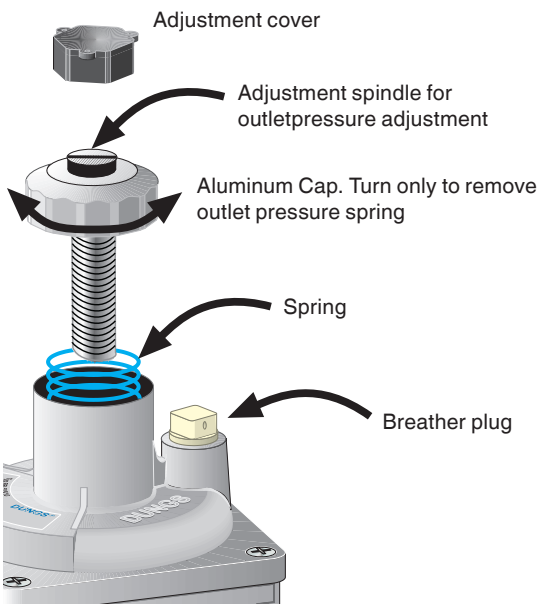




Spring Replacement

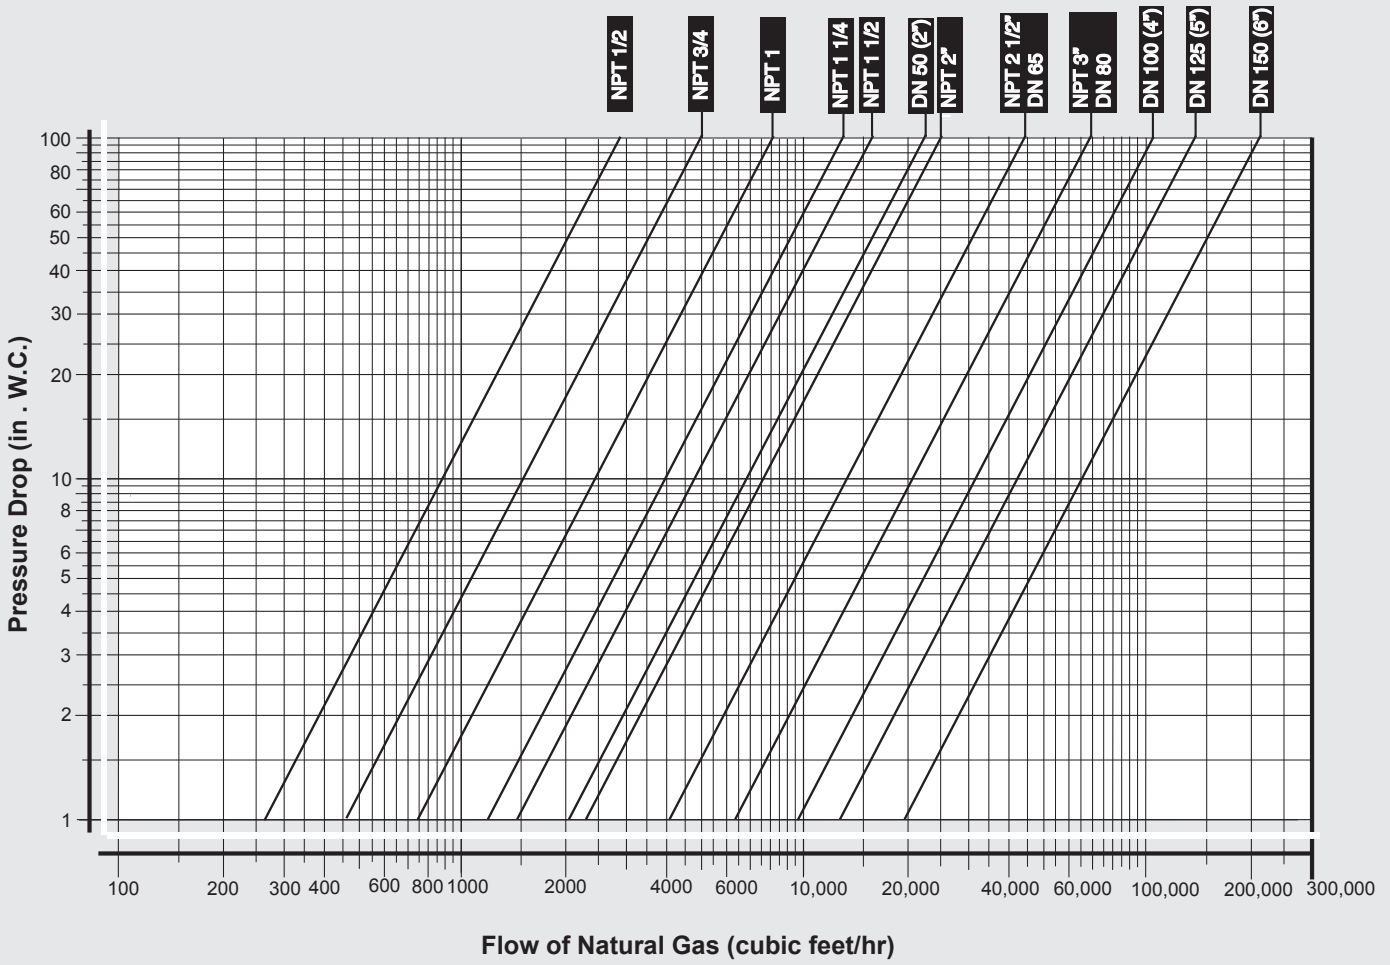
- Remove the adjustment cover.
- Completely release the spring tension by turning the adjustment spindle completely counterclockwise with a screwdriver, and remove the aluminum cap.
- Remove existing spring and insert new spring.
- Re-install the adjusment cover, and apply the new outlet pressure label provided with new outlet pressure range onto the name plate.
- Reinstall the adjustment cover.

Never have your head above or near the aluminum cap when removing regulator spring. The spring tension can be high enough to rapidly eject the aluminum cap with a large force.



Flow Curve

Flow Curve (mechanically open) Using Natural Gas.



Sizing an FRS for an application

1) Based on desired maximum flow rate, intersect the FRS flow curve and determine corresponding pressure drop.
2) Select a spring in the table on page 6 that fits within the desired outlet pressure for the application.
3) Add the desired outlet pressure to the pressure drop determined in step one above. The sum of these is the required minimum inlet pressure to achieve the desired maximum flow rate.

Example of sizing an FRS for an application

1) Desired maximum flow rate = 2,000 CHF and desired outlet pressure = 12"WC
2) From table on page 6, either the blue, red or yellow spring will work, because 12" of W.C. is within the range of these springs.
3) 2000 CFH intersects the following curves and corresponding flow rates
   FRS 707 = 16" of W.C. drop
   FRS 710 = 6.5" of W.C. drop
   FRS 712 = 2.7" of W.C. drop
   FRS 715 = 1.8 " of W.C. drop
   Adding 12" to these values gives the following minimum inlet pressures required to achieve the flow rate up to 2000 CFH with 12" of W.C. outlet pressure.
   FRS 707 requires minimum inlet pressure of 28" (16" + 12") of W.C.
   FRS 710 requires minimum inlet pressure of 18.5" (6.5" + 12") of W.C.
   FRS 712 requires minimum inlet pressure of 14.7" (2.7" + 12") of W.C.
   FRS 715 requires minimum inlet pressure of 13.8" (1.8" + 12") of W.C.
