

### **Carbon Monoxide Analyzer Configuration and Operation Manual**

 $\epsilon$ 

Instruction 0019-9370 Rev 1 October 2014

#### WARRANTY POLICY

Bacharach, Inc. (Bacharach) warrants to the buyer that this product will be free from material defects, free from manufacturing defects, and will conform substantially to Bacharach's applicable specifications at the time of delivery.

Bacharach's liability and the buyer's remedy under this warranty are limited to the repair or replacement, at Bacharach's option, of this product or parts thereof returned to Bacharach and shown to Bacharach's reasonable satisfaction to have been defective; provided that written notice of the defect is given by buyer to Bacharach within two (2) years after the date of delivery of this Product by Bacharach.

Bacharach warrants to the buyer that Bacharach will convey good title to this product. Bacharach's liability and the buyer's remedy under this warranty of title are limited to: the removal of any title defects or, at the election of Bacharach, the replacement of this product or parts thereof that are defective in title.

The foregoing warranties are exclusive and are given and accepted in lieu of (I) any and all other warranties, express or implied, including without limitation the implied warranties of merchantability and fitness for a particular purpose: and (II) any obligation, liability, right, claim or remedy in contract or tort, whether or not arising from Bacharach's negligence, actual or implied. The remedies of the buyer shall be limited to those provided herein to the exclusion of any and all other remedies including, without limitation incidental or consequential damages. No agreement varying or extending the foregoing warranties, remedies or this limitation will be binding upon Bacharach unless in writing and signed by a duly authorized officer of Bacharach.

#### Section 1. Overview

#### 1.1. Introduction

Thank you for investing in a Bacharach Monoxor<sup>®</sup> Plus carbon monoxide (CO) analyzer. To assure proper use and operator safety, please read the contents of this manual for important information on the operation and maintenance of the analyzer.

#### 1.2. Conventions

**WARNING:** A warning statement denotes a potential hazard associated with the use of this equipment. Failure to follow this information could result in serious personal injury or death.

**CAUTION:** A caution statement indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. Caution statements may also be used to alert against unsafe practices.

**IMPORTANT:** An important statement provides emphasis of an important feature, operation, etc. Failure to follow this information could void your warranty, result in improper operation, or cause equipment damage.

**NOTE:** A note statement provides emphasis of a feature, operation, practice, etc.

#### 1.3. Safety

**WARNING:** This analyzer is not intended to be used as a safety device.

**WARNING:** When testing an appliance, a full visual inspection of the appliance should be performed to ensure its safe operation.

**CAUTION:** This analyzer is not intended to be used on a continuous basis.

**CAUTION:** Do not store instrument or its sensors with solvents or products that contain solvents.

**CAUTION:** Except for sensor and battery replacement, this analyzer should only be opened and/or serviced by authorized Bacharach personnel. Failure to comply may void the warranty.

**HAZARDOUS AREA WARNING:** This instrument has not been designed to be intrinsically safe for use in areas classified as hazardous locations. For your safety, **DO NOT** use it in hazardous (classified) locations.

**CAUTION:** Do not use flammable or combustible substances (like carburetor fluid used for cleaning the probe) near an open flame.

**CAUTION:** When the instrument is used in an inefficient oil-fueled appliance where there is a high emission of soot, the probe's sample filter may become clogged. Before every use check the filter to confirm it is clean or replace it with a new filter.

To prevent soot intake and a clogged filter, a smoke test should be performed before operating under such conditions. This ensures that the furnace or boiler is burning at a level appropriate for the use of this instrument.

#### 1.4. Product Overview

The Monoxor® Plus is a portable hand-held carbon monoxide (CO) analyzer for use in residential and light commercial applications. It is intended to be used by:

- HVAC contractors
- home inspectors

- maintenance personnel
- safety inspectors

to detect and display concentrations of CO gas between 0 and 2000 ppm. The analyzer is capable of testing for CO in both ambient room air and in the fluegas stream of fossil-fuel fired furnaces and boilers. Using the optional appliance kit, you can measure CO levels emitted from fossil-fuel-based appliances such as gas stoves and gas fireplaces.

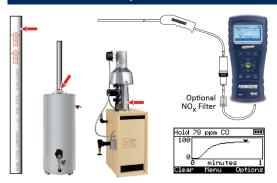

CO gas is colorless, odorless, and deadly. Test CO levels in suspect ambient air. Perform an automated 15-minute test, watch live values, or view a dynamic CO graph over time.

#### COMBUSTION CO (SHOWN WITH OPTIONAL NOx FILTER KIT P/N: 0024-1505)

CO levels in flue gas can indicate good or poor combustion. For furnaces, water heaters, and boilers, use CO levels to gauge the effectiveness of the combustion adjustments you make.

Lower CO levels mean you're close to the combustion "sweet spot."

#### APPLIANCE CO USING OPTIONAL APPLIANCE KIT (P/N: 0024-8555)

The analyzer detects and displays the presence of CO by first drawing in a gas sample from the area being tested by the analyzer's built-in motorized pump. The gas sample is next directed into a sensor chamber where the sample is analyzed for the presence of CO. If CO is detected, the CO ppm level is given on the analyzer's main display. A trending screen (accessible from the RUN screen by using the right or left arrow key) shows dynamic CO levels graphed

over a programmable time period (from 30 seconds to 15 minutes). In addition to the visual notifications, you can set a CO alarm limit, above which an audible alarm buzzer will beep repeatedly. An audible alarm with a slower beep frequency occurs when the batteries are low.

A backlight enables the operator to read the display in dimly-lit areas. The displays and menus are available in multiple languages (English, French and Spanish).

A permanent record of the detected CO level, along with the current time and date, can be made by using the optional wireless IrDA printer. Test records can also be saved in memory.

An ambient CO feature takes approximately 15 minutes to complete and provides a minute-by-minute snapshot of CO readings, as well as a "Max CO" value that represents the highest CO reading measured during the entire test. Results can be saved to memory and/or printed. Use the optional CO Appliance Kit (P/N 0024-8555) to perform an ambient CO measurement if required.

A calibration reminder can be set to occur every 6, 8, 10, 12, or 15 months after the last calibration. (Select "Never" to disable this feature.) Regular calibration periods of 6 months to 1 year are recommended. The calibration reminder value sets a time period after which the analyzer displays a calibration reminder message during warm-up.

To avoid the need for manual CO sensor calibrations, the B-Smart® Sensor program is supported with the Monoxor® Plus. After enrolling in the program, pre-calibrated replacement B-Smart® CO sensors are shipped at predetermined intervals of your choice.

- Choose a program start date that best suites your needs.
- Receive a pre-calibrated B-Smart<sup>®</sup> sensor.
- Return your old sensor in a returnable, pre-labeled container.

Benefits include no downtime, self calibration, convenience, and cost savings. For additional information about the B-Smart® Calibration Program, contact Bacharach at 1-800-736-4666 or email Help@MyBacharach.com.

A programmable inactivity timeout causes the analyzer to initiate shutdown mode if no key presses occur for the specified time period. If the analyzer initiates automatic shutdown or is turned OFF manually while a high level of CO is still present within the unit, the automatic CO purge feature forces the analyzer's pump to remain on until the detected CO level drops below 50 ppm.

The instrument is supplied with the following components:

- probe and hose assembly
- four disposable "AA" alkaline batteries
- hard carrying case
- factory-calibrated and installed CO sensor.

Depending on the model and kit, some or all of the following components are included:

- spare filters
- Fyrite<sup>®</sup> User Software (FUS)
- USB cable (type A to mini B)
- Infrared Data Association (IrDA) printer with four disposable "AA" alkaline batteries
- printer paper.

Using the optional thermocouples, ambient and flue gas temperatures can be measured. Additionally, the Monoxor® Plus can calculate a differential temperature based on two sampled temperatures (T1 and T2) using the optional stack thermocouple or optional probe assembly (with built-in thermocouple). After you take the two sample readings, the differential value (T1-T2) is calculated, optionally saved in memory, displayed on the main run screen, and is shown on printouts.

#### 1.5. Components

- Monochrome Display (LCD) 1 with Backlight
- Function Keys (F1, F2, and F3) 2
  - Context sensitive
  - Functions shown at bottom of display
- 3, 4 Up and Down Arrow Kevs
  - Scroll up/down through a list
  - Increase/decrease alphanumeric values
- 5, 6 Left and Right Arrow Keys
  - Scroll left/right through a field
  - Jump to top/bottom of list
  - Access the trending screen
- 7 **Enter Key** 
  - Choose highlighted item
  - Accept value/characters
- 8 Escape Key
  - Cancel most operations and display previous screen
- 9 Power/Backlight Key

• Press & release Power ON

• Press & release Toggle backlight ON/OFF Begin power OFF sequence

Press & hold (2 secs)

10 Run/Hold Kev

> While in HOLD Turn on pump, display RUN screen, and

> > begin test.

 While in RUN Turn off pump, display HOLD screen and last

set of test data.

 In most menus Display HOLD screen.

 During power down Return display to HOLD screen

(cancel power down).

#### 1.6. Features

- Sensors (pp 9, 17, 18, 32, 42)
  - o Field-replaceable electrochemical sensor (B-Smart® CO)
  - Temperature measurement using a Type K thermocouple (with probe assembly 19-7111)
- Power (pp 10, 13)
  - 4 AA alkaline batteries (included)
  - 4 AA lithium batteries
  - 4 AA rechargeable batteries (externally charged)
  - Low battery warning
- Testing Features (pp 17, 19, 28, 29, 30, 31)
  - Complete test results (10 sets) can be stored, recalled, displayed, and printed
  - Time and date stamping of test results
  - Differential temperature
  - Secure calibration function (password protected)
  - Auto power-off feature with sensor purge feature
  - Status and diagnostic menus
  - Ambient CO
- User Customizations (p 20)
  - Multi-language interface
  - Auto/Manual zero functions for the CO sensor
  - Customized user information (3 lines of 20 characters)
  - Customized logo on printouts (192 x 384 pixels)
  - Temperature unit selection
- Hardware (pp 6, 11, 32, 38)
  - Probe/hose assembly for gas transport
  - Sample pump to provide gas sample delivery
  - Backlit monochrome graphic LCD
  - Hard carrying case
  - USB 2.0 (mini-B connection) for PC interface and communications
- PC Interface (p 38)
  - o USB cable (Type A to Mini B)
  - Fyrite<sup>®</sup> User Software (FUS) (Windows compatible)

#### Section 2. Setup

#### 2.1. Connecting the Probe

A rigid stainless steel probe with handle is connected to a flexible hose with an integral water trap/filter and is used to draw a gas sample into the analyzer from the room, grilles, diffusers, and furnace flues.

- 1. Inspect the flexible hose for cracks. If a hose is defective, replace the entire probe assembly.
- 2. Before using the analyzer, check that the water trap/filter is clean and dry. If necessary, dry out the trap and replace the filter element.
- 3. Push the probe's "sample gas" tubing onto the GAS inlet connector.

#### 2.2. Front Panel Buttons

Button	Description
PWR	<ul> <li>Powers the analyzer ON and OFF. Hold this button down for at least 2 seconds to turn the power OFF.</li> <li>Toggles the backlight ON and OFF while the analyzer is turned ON.</li> </ul>
	<ul> <li>UP (▲), DOWN (▼), LEFT (◄), and RIGHT (▶) arrows are context-specific navigation buttons for the menus.</li> <li>UP (▲) and DOWN (▼) arrow buttons scroll to menu options that are hidden from view (when a side scroll bar is displayed indicating additional information).</li> <li>UP (▲) and DOWN (▼) arrow buttons cause the displayed value to increase or decrease accordingly.</li> <li>LEFT (◄) and RIGHT (▶) arrow buttons jump to the top and bottom of lists, respectively.</li> <li>LEFT (◄) and RIGHT (▶) arrow buttons position the active cursor on specific elements of a value to be changed.</li> <li>LEFT (◄) and RIGHT (▶) arrow buttons display the CO Trending screen from the Run/Hold screen.</li> </ul>
	The ENTER button. Performs the action selected.
RUN HOLD	<ul> <li>While in the HOLD screen, turns the sample pump on, displays the RUN screen, and begins a test.</li> <li>While in the RUN screen, turns the sample pump off, displays the HOLD screen and the last set of data.</li> <li>Displays the HOLD screen while pressing it from most menus.</li> <li>Returns the display to the HOLD screen while pressing it during the shutdown sequence.</li> </ul>
ESC	The ESC button cancels most operations and displays the previous screen.
F1 F2 F3	Pressing function keys accepts the corresponding function defined above that key at the bottom of the display (for example, PRINT, SAVE, MENU, etc.).

#### 2.3. Power Options

Power options include:

- Disposable AA alkaline batteries (included)
- Disposable AA lithium (Li) batteries
- Externally charged rechargeable NiMH batteries.

Check the Monoxor® Plus for sufficient power prior to each use. Replace the batteries if the low (or replace) battery symbol appears in the upper right corner of the Monoxor® Plus screen.

Batteries (4 AA, Fresh or Fully Charged)	Estimated Life Span in Hours (Continuous, Pump On)
Alkaline (disposable)	15 hours
Lithium (disposable)	20 hours
Rechargeable	8 hours

Replace batteries as follows.

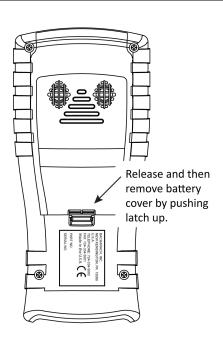

- 1. Remove the battery cover from the back of analyzer.
- 2. If old batteries are installed, remove them and properly discard them.
- 3. Observing the polarity markings inside the battery compartment, install four 'AA' disposable (alkaline or lithium) batteries or four fully-charged (externally charged) AA rechargeable NiMH batteries.
- 4. Replace the battery cover.

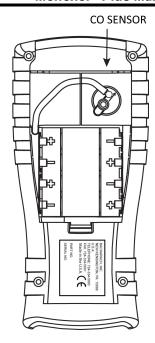

**NOTE:** The Monoxor<sup>®</sup> Plus does NOT charge rechargeable batteries.

**NOTE:** The Monoxor<sup>®</sup> Plus sounds a series of beeps to indicate that the batteries need to be replaced.

**NOTE:** A Set Clock error message will be displayed if the instrument is without power for an extended period of time.

#### 2.4. Turning On the Monoxor® Plus

To turn on the Monoxor® Plus, press the PWR button.

**NOTE:** After turning on the Monoxor<sup>®</sup> Plus, it performs a warm-up procedure which includes an auto-zero procedure (when in Auto Zero mode) for the sensors (see pages 15 and 26). For this reason, be sure to turn on the Monoxor<sup>®</sup> Plus in a clean air environment. When the analyzer is in CO Manual mode, the analyzer will indicate the background CO during startup.

 $\nabla \nabla \nabla \nabla$ 

#### Section 3. Configuration

#### 3.1. Menu Structure Overview

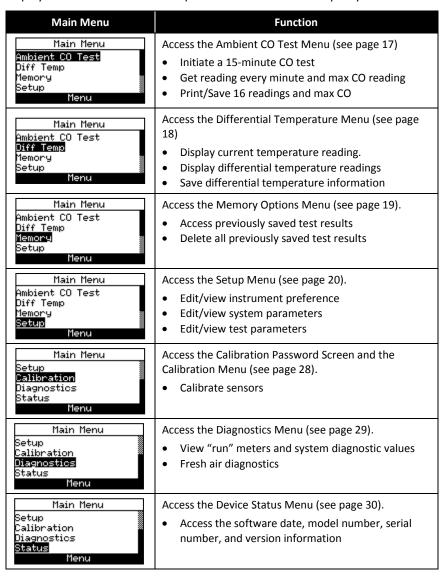

Menus and the items contained within them are described in a top-down fashion, starting from the startup screens and working sequentially through the menus and menu items.

#### 3.2. The Warm-up Sequence

#### 3.3. Main Menu

Display the Main Menu by pressing the F2 key. Note that features and items displayed in menus are model dependent. Your screens may vary.

#### 3.4. Ambient CO Menu

#### **Function**

Access the Ambient CO Menu.

When initiated, the Ambient CO feature monitors CO values continuously and captures a reading every minute for 15 minutes (a total of 16 readings from  $t_0$  to  $t_{15}$ ).

Press ENTER to initiate the Ambient CO test. This begins a 15-minute test cycle, during which a status screen is displayed. It shows the starting ambient CO value, the current CO value, and the elapsed time into the test.

Ambient CO		Ambient CO	
Start: Current: Time:	maa 0 maa 0 80:00	Start: Current: Time:	0 ppm 0 ppm 13:40
Cancel		C	ancel

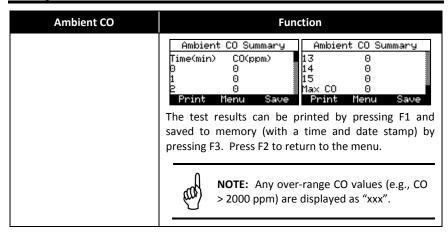

**NOTE:** Press the F2 key to cancel a test in progress.

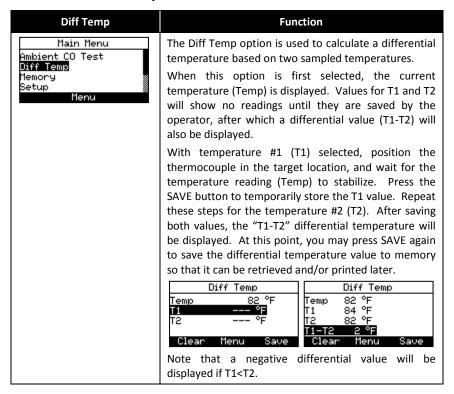

After the test is complete, the Ambient CO Summary screen is displayed. This is a scrollable window that shows the 16 CO "snapshot" readings, as well as the maximum CO reading that was sampled during the entire test.

**NOTE:** The Max CO Reading is the highest sampled CO reading – even if the reading was taken in between one of the sample "snapshot" readings.

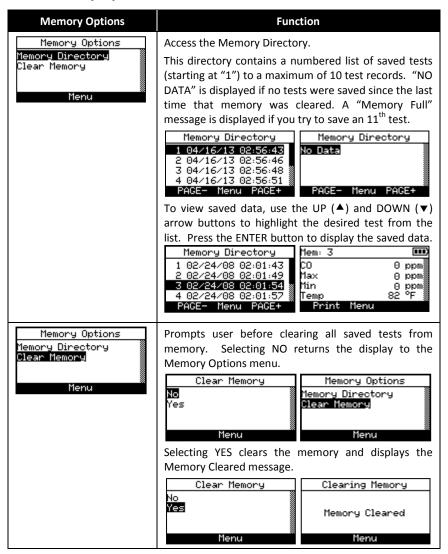

#### 3.5. Differential Temperature Menu

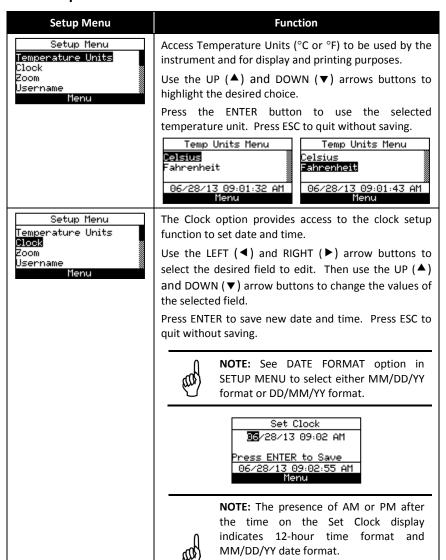

**NOTE:** The Differential Temperature feature requires the use of the optional thermocouple (P/N: 0104-1797) or the optional probe assembly (P/N: 0019-7111).

#### 3.6. Memory Options Menu

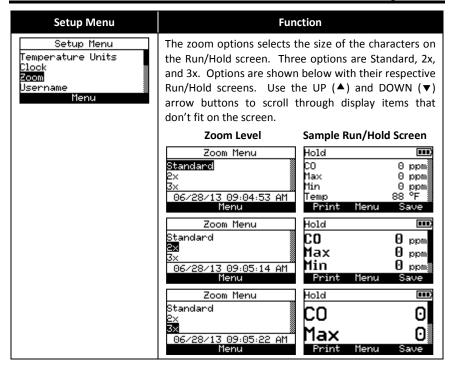

#### 3.7. Setup Menu

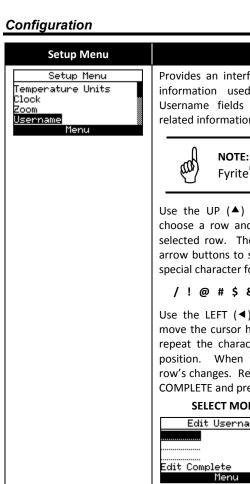

20 0019-9370 Rev 1

Similarly, the absence of AM or PM indicates 24-hour time format and the

date is in DD/MM/YY format.

#### **Function**

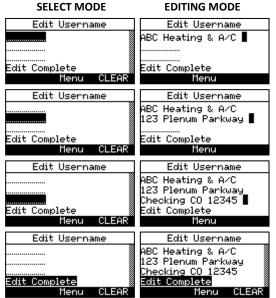

Provides an interface for entering user identification information used on printouts. Generally, the Username fields contain the HVAC company and related information.

**NOTE:** This data can be entered using the Fyrite<sup>®</sup> User Software (FUS).

Use the UP ( $\blacktriangle$ ) and DOWN ( $\blacktriangledown$ ) arrow buttons to choose a row and press ENTER to begin editing the selected row. Then use the UP ( $\blacktriangle$ ) and DOWN ( $\blacktriangledown$ ) arrow buttons to select the desired letter, number, or special character for the current text position.

#### / ! @ # \$ & \* - ' <SPACE> a-z A-Z 0-9

Use the LEFT (◀) and RIGHT (▶) arrow buttons to move the cursor horizontally on the selected row and repeat the character selection process for each text position. When finished, press ENTER to save the row's changes. Repeat for all 3 lines. Then select EDIT COMPLETE and press ENTER to finish.

Regular calibration

#### **Function** Setup Menu Setup Menu The Language Selection option allows the user to Clock choose a language for all menus. Use the UP (▲) and Zoom DOWN (▼) arrow buttons to scroll through language Jsername Language Selection options. Use ENTER to enable the selected language. Language Selection English Français <u>Español</u> 06/28/13 09:14:59 AM Cancel Three languages are available: English, French, and Spanish. Setup Menu The button sound option is used to select whether or Zoom not the analyzer makes an audible sound every time a Jsername key is pressed. Select OFF to disable this feedback, or anguage Selection Button Sound ON to enable this feedback. Then press ENTER to select, or ESC to discard changes. Button Sound Menu Button Sound Menu Off Off 0n 0n 06/28/13 09:30:29 AM 06/28/13 09:30:37 AM Setup Menu The CAL Reminder Period option sets a time period Isername after which the analyzer displays a calibration reminder Language Selection message during warm-up. Calibration reminders can Button Sound CAL Reminder Period be set to occur never, 6, 8, 10, 12, or 15 months after Menu the last calibration. Select NEVER (the default setting) to disable this feature. When the preset period is exceeded the instrument will display the reminder, and how long since the sensor was last calibrated. If a calibration reminder is displayed, the operator can press the RUN/HOLD key to move to the RUN/HOLD

to the previous setting.

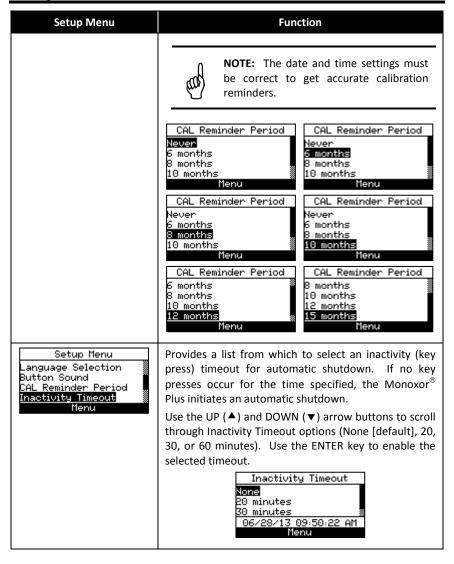

Screen for normal operation.

select the desired time period.

periods of 6 months to 1 year are recommended. Set the calibration reminder period as follows:

1. Use the UP (▲) and DOWN (▼) arrow buttons to

2. Press ENTER to save the selection or **ESC** to revert

# Setup Menu Setup Menu Button Sound CAL Reminder Period Inactivity Timeout Post-purge Period Menu

#### **Function**

Provides a list from which the user may chose a minimum purge duration time (minimum length of time that the pump continues to run) after shutdown is initiated. Use a longer Post-Purge Period if the Monoxor® Plus has been exposed to high concentrations of CO gas. Use ENTER to enable the selected Post-Purge Period. "PURGING SENSORS" is displayed on the shutdown screen if a Post-Purge Period is enabled.

Use the UP (▲) and DOWN (▼) arrow buttons to scroll through Post-purge Period options.

## Setup Menu CAL Reminder Period Inactivity Timeout Post-purge Period Date Format Menu

The Date Format option provides a list from which the user may select the desired date format used by the instrument.

- MM/DD/YY (w/ 12-hour time format)
- DD/MM/YY (w/ 24-hour time format)

Use the UP (▲) and DOWN (▼) arrow buttons to highlight the desired date format. Press ENTER to save new date format. Press ESC to quit without saving.

#### Setup Menu **Function** Provides a list from which the user may select the Setup Menu Inactivity Timeout desired method for zeroing the CO sensor. Post-purge Period • Auto-Zero happens automatically at warm-up. <u>Date Format</u> CO Zero Setting • Manual zero is used to initiate the zeroing process Menu whenever desired. Use the UP (▲) and DOWN (▼) arrow buttons to highlight the desired zeroing method. Press ENTER to save. Press ESC to guit without saving. CO AUTO ZERO CO MANUAL ZERO CO Zero Setting CO Zero Setting Auto-Zero Auto-Zero Manual Zero 1anual Zero Menu Menu Auto-Zero Manual Zero Place instrument in Place instrument in fresh air to zero fresh air to zero Press ENTER Press ENTER Menu Menu Setting Manual Zero Warm Up: 55 Warm Up: 45 CO-Auto-Zero

By default, the Monoxor<sup>®</sup> Plus automatically zeroes all sensors on ambient air when the instrument is turned on.

The Monoxor® Plus can be set to perform and store a manual zero for the CO sensor. The instrument uses the stored value to indicate background CO values after warm-up instead of performing an auto-zero on the background gas.

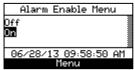

26 0019-9370 Rev 1

#### **Function**

The CO Alarm Limit option is used to enable and disable the alarm limit feature.

If enabled (ON), an additional screen is displayed where you set the CO alarm setpoint. The alarm limit is selectable from 0 to 2000 ppm. Use the Up and Down arrow buttons to scroll to the desired alarm limit value then press ENTER.

Note that scrolling wraps forward and backwards, so pressing the down arrow at 0 ppm wraps backwards to 2000. Similarly, pressing up arrow at 2000 ppm wraps forward to 0 ppm.

When the CO Alarm Limit option is enabled, the builtin buzzer will sound if CO readings exceed the CO alarm limit that you defined.

#### 3.8. Calibration Menu

#### **Function**

Calibration is performed by applying known values and accessing the password-protected menu items. When the Calibration Menu is selected, the user must enter a 4-digit numeric security code in order to proceed to the calibration options. The default password is 1111.

Use the UP (▲) and DOWN (▼) arrow buttons to scroll through numerals 0-9 until the desired numeral is reached. Press ENTER to advance to the next position of the password. Press ENTER after all four digits are set. Press ESC to return to the SETUP MENU.

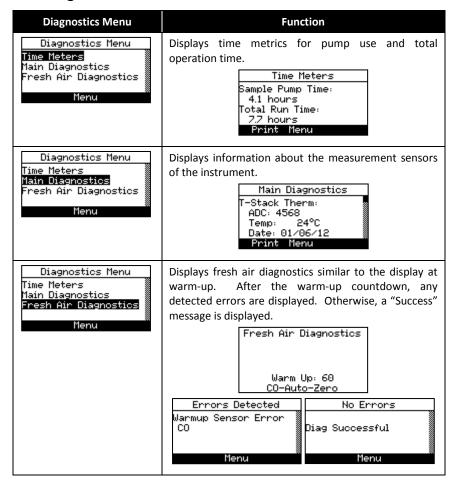

**NOTE:** The calibration password can be changed through the Fyrite<sup>®</sup> User Software (FUS).

Refer to Chapter 5 (page 39) for additional screens and calibration procedures.

#### 3.9. Diagnostics Menu

#### 3.10. Status Menu

Status Menu	Function

# Section 4. Operation

#### 4.1. Overview

To operate the Monoxor® Plus, you simply. . .

- Turn the analyzer ON
- Wait for the unit to warm up
- Take a gas sample.

Before beginning your test, verify the following:

- menu items are properly configured
- the disposable filter is clean
- the probe is attached to the instrument
- the power is ON and sufficient (one of the following):
  - o four new batteries (AA alkaline)
  - o four new batteries (AA lithium)
  - o four fully-charged AA rechargeable batteries
- the warm-up process has completed in fresh air without interruption or errors.

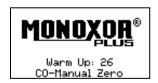

#### 4.2. Taking a Gas Sample

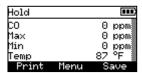

**IMPORTANT:** Important! If the CO channel is set up for Auto Zero (refer to Section 3.4.3), ensure that the analyzer will be sampling fresh air (containing no CO) when turned ON.

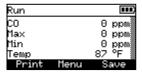

Turn ON the analyzer by pressing the PWR button. Observe that when power is first applied, the software revision level is first displayed followed by a screen that counts down the warm-up period. The warm-up period is either 30 seconds or 60 seconds depending on the setting and sensor condition.

Following warm-up (and an optional error screen), the Main Menu screen appears. If the probe is being used, insert the probe tip into the area to be sampled. Press the Run/Hold button once to display the HOLD screen (last values), and a second time to display the RUN screen (dynamic display of current CO level in ppm, temperature, and min/max CO values.

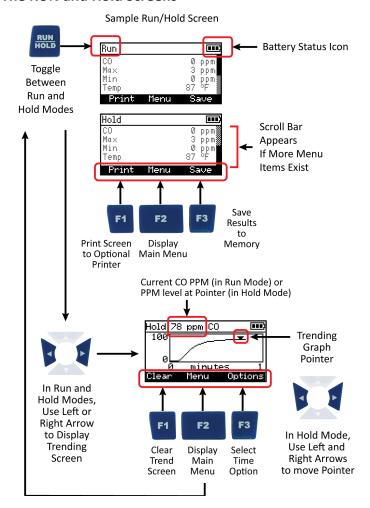

**NOTE:** If a sensor error was detected during warm-up, the CO Sensor Error Screen will be displayed.

#### 4.3. The RUN and Hold Screens

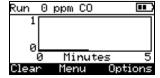

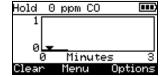

**NOTE:** Use the left or right arrow buttons from the Run or Hold screen to view the CO trending graph.

#### 4.4. CO Trending Graph

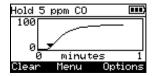

A trending screen is accessible from the RUN or HOLD screen by using the right of left arrow keys. The CO Trending Screen shows dynamic CO levels graphed over a programmable time period. User-selectable time periods are:

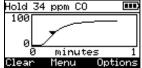

- 30 seconds
- 1 minute
- 3 minutes
- 5 minutes
- 15 minutes.

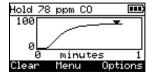

The graph continues to sample CO gas while in RUN mode, showing the current PPM reading above the dynamic graph. Press the RUN/HOLD button (HOLD mode) to freeze the current graphical snap-shot. In HOLD mode, a pointer appears on the graph. This pointer can be moved along the graph using the left and right arrow keys. As you move the pointer left and right, the value of the CO at that point in the sampling is displayed at the top of the screen.

# 4.5. Ending a Test

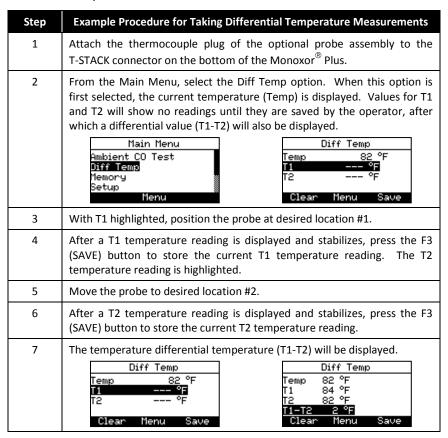

**WARNING:** Burn Hazard. Do not touch the probe after removing it from a flue. Allow the probe to cool before handling (about 5 minutes).

After taking a gas sample, remove the probe and take the analyzer to an area containing fresh air. Allow the pump to run until the CO reading drops to near zero.

#### 4.6. Taking Differential Temperature Measurements

In certain combustion applications, it may be desirable to have a differential temperature measurement. Use the Diff Temp menu and either the optional probe assembly with thermocouple (P/N 0019-7111), or one of the optional K-Type thermocouples (P/N 0104-1798 or P/N 0104-1797) to accomplish this task.

The Monoxor® Plus calculates the differential temperature based on two sampled temperatures (T1 and T2) which it reads from the optional probe assembly's thermocouple (which is connected to the T-STACK connector of the instrument). After you take the two sample readings, the differential value (T1-T2) is calculated, optionally saved in memory, displayed on the main run screen, and is shown on printouts. Use the following procedure to perform a differential temperature measurement.

Step	Example Procedure for Taking Differential Temperature Measurements	
8	At this point, you may press SAVE again to save the differential temperature value to memory so that it can be retrieved and/or printed later.	
9	Carefully remove the probe assembly and allow it to cool.	

**NOTE:** A negative differential value will be displayed if T1<T2.

### 4.7. Timed Ambient CO Testing

This procedure takes approximately 15 minutes to complete and provides a minute-by-minute snapshot of CO readings, as well as a "Max CO" value that represents the highest CO reading measured during the entire 15-minute test. Results can be saved to memory and/or printed. Use the optional CO Appliance Kit (P/N 0024-8555) and the following procedure to perform an ambient CO measurement.

Step	Example Procedure for Taking Ambient CO Measurements	
1	Attach optional appliance kit probe (P/N 0024-8555) if required.	
2	Turn on the Monoxor® Plus in a fresh air environment and wait for initialization to complete.	
3	Verify successful initialization (no errors).	
4	Check battery status (see page 13). If battery life is questionable, replace the batteries, as the Ambient CO test takes approximately 15 minutes to complete.	
5	Move instrument to target location to be tested.	
6	Press F2 to display the Main Menu.	
7	Use the down arrow to highlight Ambient CO Test and press the ENTER button.	
8	Follow the on-screen instructions to initiate the test.	
	Refer to page 17 for details on navigating the ambient CO test screens, viewing results, saving results to memory, and printing results.	

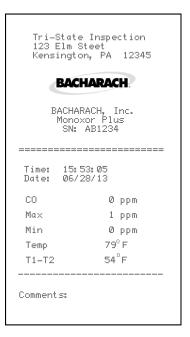

# 4.8. Printing Using the Optional IrDA Printer

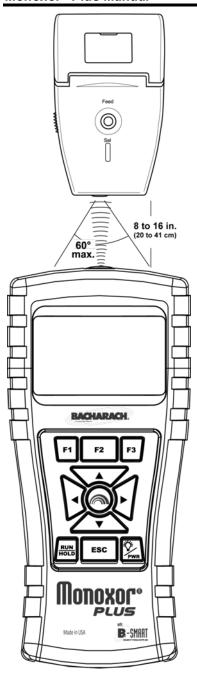

The instrument has the ability to store, recall (to the display), and print sets of time- and date-coded test records. The time and date are set through software menu selections.

- Displaying stored records is done through the MEMORY DIRECTORY MENU.
- Press F1 to print displayed test records.

Step	Example Printing Procedure Using Optional IrDA Printer	
1	Monoxor <sup>®</sup> Plus should be turned on and displaying a screen with an F1 rint option.	
2	eck for a sufficient supply of paper and batteries in the IrDA printer.	
3	Turn on the printer.	
4	Position the printer within 8 to 16 inches (20 to 41 cm) from the instrument and at no greater than a 60-degree angle.	
5	Press F1 to print.	
6	Turn off printer when complete.	

Tri-State Inspection
123 Elm Street
Kensington, PA 12345

BACHARACH.

BACHARACH, Inc.
Monoxor Plus
SN: AB1234

Time: 12:53:05
Date: 06/28/13

#### **IR Communications Settings:**

Baud Rate: 9600
Data Bits: 8
Stop Bits: 1
Parity: None
Protocol: IRDA-SIR

Distance: 8-16 in (20-41 cm) Angle: 60° maximum

The Monoxor<sup>®</sup> Plus provides three lines of 20 characters for user information. This information will appear with test records when they are printed. User name and optional information are entered via software menu selections in the SETUP MENU or via the Fyrite<sup>®</sup> User Software (FUS).

In addition to the three lines of text, the Monoxor® Plus can be setup to include a custom logo on printouts. Logos are loaded into the instrument using the Fyrite® User Software (FUS). Logo size is limited to 192 x 384 pixels (height x width) and must be in one of the following formats: .BMP, .JPG, .PNG, or .TIFF. For best results, the logo should be saved in black and white.

#### 4.9. Turning Off the Analyzer

Turn OFF the analyzer by pressing the power button and holding for approximately 2 seconds. The analyzer will count down from 5seconds before turning OFF. Pressing ENTER, however, will abort the count down and keep the analyzer ON.

# 4.10. PC Interface and Fyrite<sup>®</sup> User Software

A PC with Fyrite® User Software (FUS) installed can set, edit, and transfer the following:

- instrument time and date
- calibration password
- time meters
- B-SMART<sup>®</sup> code
- user name

- instrument settings
- customer logo
- firmware updates
- language.

 $\nabla \nabla \nabla$ 

# Section 5. Calibration and Maintenance

### 5.1. Serviceability

The instrument operator is able to easily replace the following components without the use of tools:

- probe assembly
- probe filters
- batteries
- B-Smart<sup>®</sup> CO sensor
- printer paper.

Additionally, a technician, with the use of factory-provided instructions, can:

- perform basic diagnostics
- confirm proper operation

before putting the unit back into service. Field calibration is also possible with the proper equipment. Refer to the calibration section for more information.

#### 5.2. Cleaning the Probe

The probe tube and gas sample hose will become dirty under normal use.

**NOTE:** The filter element should prevent soot from reaching the analyzer's internal components. If the probe is not kept clean, it could become clogged and restrict the flow of gas into the analyzer, resulting in incorrect test readings.

**NOTE:** An analyzer that tests natural gas furnaces normally requires less frequent cleaning than an analyzer used for testing coal- or oil-fired furnaces.

# 5.2.1. Equipment Required

- Alcohol
- Aerosol Can of Automotive Carburetor Cleaner
- Clean Rag
- Source of Compressed Air (optional)

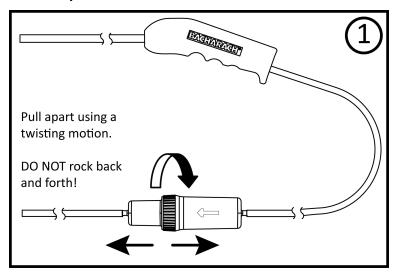

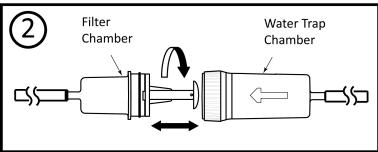

**CAUTION:** Do not use flammable or combustible substances (like carburetor fluid used for cleaning the probe) near an open flame.

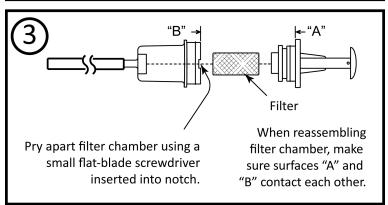

#### 5.2.2. Procedure

Step	Cleaning the Probe	
1	Remove gas sample hose from the disposable filter assembly.	
	CAUTION: Carburetor cleaner damages plastic components.  Take precautions not to spray cleaner onto the probe handle or analyzer.	
2	Insert the plastic spray tube of the carburetor cleaner into the gas sample hose, and then liberally spray carburetor cleaner through the hose and out the probe tube.	
3	After spraying, remove all the residual cleaner by repeatedly flushing the gas hose and probe tube with alcohol.	
4	Wipe off the surfaces of the probe and tubing with a clean cloth.	
5	Allow the parts to dry completely. If available, blow compressed air through the probe to expedite the drying process.	
6	Reconnect gas sample hose to the disposable filter assembly.	

# 5.3. Filter Replacement

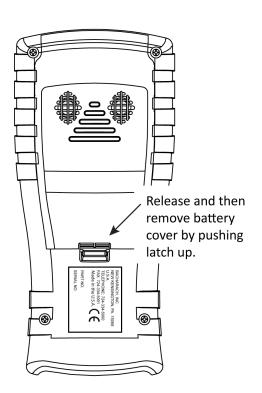

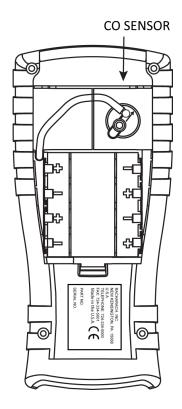

# 5.4. CO Sensor Replacement

#### 5.4.1. Accessing the CO Sensor

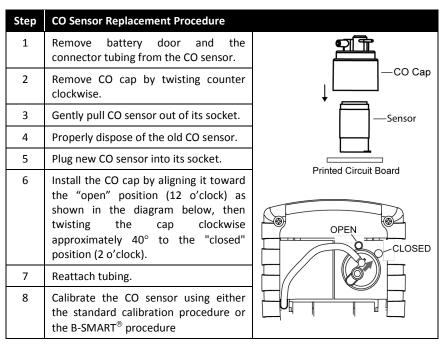

# 5.4.2. Material Required (As Needed)

• CO Sensor (P/N 0024-7265) or B-Smart<sup>®</sup> sensor (P/N 0024-1467).

#### **5.4.3.** CO Sensor Replacement Procedure

Follow the procedure below for CO sensor replacement.

# 5.4.4. B-SMART® CO Sensor Replacement

Step	B-SMART <sup>®</sup> CO Sensor Replacement	
1	Enter the CALIBRATION MENU. Note that this requires password validation (see page 28).	
2	Use the UP (▲) and DOWN (▼) arrow buttons to select B-Smart. Press ENTER to display the B-Smart code screen.	
3	Use the UP (▲) and DOWN (▼) arrow buttons to enter the 10-digit alphanumeric code supplied with the pre-calibrated B-SMART® sensor. Use the LEFT (◄) and RIGHT (▶) arrow buttons to move the cursor across the screen. Press ENTER.	
	Calibration Menu  Temp CO T-Ref B-Smart  Menu B-Smart Enter Code D9-00-00-00-00 Fress ENT B-Smart Menu B-Smart Menu B-Smart Menu B-Smart Menu	

# NOTE: If the correct code was entered, the analyzer accepts it and returns to the CALIBRATION MENU. If an incorrect code was entered, the screen will display "Invalid Code." Check to make sure the correct code has been entered. If problem persists, contact your nearest Bacharach Service Provider. NOTE: B-SMART® codes can be entered through the Fyrite® User Software (FUS).

**NOTE:** Installing a B-SMART<sup>®</sup> sensor forces the instrument to perform a zero function (either manual or automatic).

**NOTE:** Bacharach offers a convenient Exchange Program (where available) that allows the customer to regularly receive pre-calibrated replacement sensors that include a code that can be entered into the analyzer for a quick convenient setup. Contact Bacharach customer service for more details about this program.

# 5.5. Temperature Calibration

This procedure first zeroes and then spans the temperature channel to known temperature values.

The use of an electronic thermocouple simulator is the preferred method of producing the desired calibration temperatures. Alternatively, ice and boiling water baths can be used.

#### 5.5.1. Materials Required

• Thermocouple simulator (K-type)

Range: 0 to 600° F (-18 to 316° F) Accuracy:  $\pm 0.5^{\circ}$  F ( $\pm 0.3^{\circ}$  C)

• (Alternatively) ice water, boiling water, thermometer

#### 5.5.2. Temperature Calibration Procedure

Step	Temperature Calibration Procedure
1	Plug the simulator into the TEMP connector located at the bottom of the analyzer.  Alternatively: Plug the probe's thermocouple into the TEMP connector located at the bottom of the analyzer if using optional probe with
	thermocouple accessory (P/N 0024-7111).
	IMPORTANT: DO NOT attach the probe's gas hose to the analyzer's GAS port; otherwise water will be drawn into the analyzer!
2	If not already done, turn ON the analyzer and display the CALIBRATION Menu. Note that this requires password validation (see page 28).
3	Use the UP (▲) and DOWN (▼) arrow buttons to highlight Temperature, and then press ENTER to display the CALIBRATE TS-ZERO screen.  Calibration Menu  Temp CO T-Ref B-Smart  Menu  Measured: S2.0 °F Press ENT  Print Reset  "Measured" is the current temperature reading. "Applied" is a known
	temperature that will be applied for calibration purposes.
4	Set thermocouple simulator to 32° F (0° C), and then use the UP (♠), DOWN (▼), LEFT (◄), and RIGHT (▶) arrow buttons to enter an Applied value that exactly equals the setting of the simulator.
	Alternatively: Submerge probe tip into an ice-water bath with a thermometer, wait several minutes, and then use the UP (▲) and DOWN (▼) arrow buttons to enter an Applied value that exactly equals the thermometer reading.
	NOTE: The calibration range is from 32 to 41° F (0 to 5° C). An attempt to calibrate outside this range will cause the message "Applied Value High" (or Low) to appear at the bottom of the screen.
5	Wait until the Measured reading stabilizes, and then press ENTER to calibrate the TS-Zero Measured value to that of the Applied value, after which the message "Good Calibration" should briefly appear followed by the CALIBRATE TS-SPAN screen.
6	Set thermocouple simulator to 572° F (300° C), and then use the UP (♠), DOWN (▼), LEFT (◀), and RIGHT (▶) arrow buttons to enter an Applied

Step	Temperature Calibration Procedure	
	value that exactly equals the setting of the simulator.	
	Calibrate TS-Span Measured: 570°F Applied: 372°F Press ENT	
	Print Reset	
	<b>Alternatively:</b> Submerge probe tip into a container of boiling water with a thermometer, wait several minutes, and then use the arrow buttons to enter an Applied value that exactly equals the thermometer reading.	
	NOTE: The calibration range is from 175 to 625° F (80 to 329° C). An attempt to calibrate outside this range will cause the message "Applied Value High" (or Low) to appear at the bottom of the screen.	
7	Wait until the Measured reading stabilizes, and then press ENTER to calibrate the TS-Span Measured value to that of the "Applied" value, after which the message "Good Calibration" should briefly appear followed by the CALIBRATION menu being re-displayed.	

#### 5.6. CO Sensor Calibration

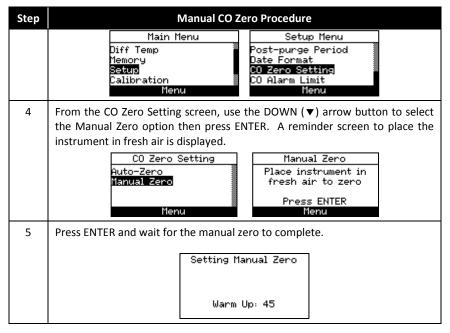

#### 5.6.1. Materials Required

- Calibration kit, P/N 0024-7059
- Gas cylinder: 500 ppm CO in air, P/N 0024-0492

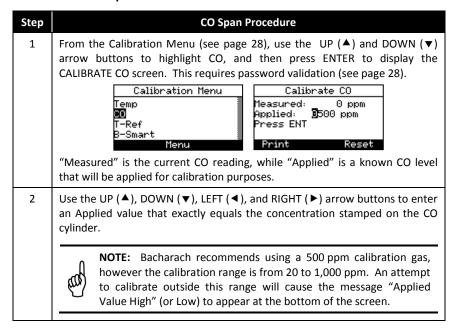

#### 5.6.2. CO Manual Zero Procedure

The CO zeroing process is done automatically during warm-up or manually using the manual zero feature (see page 26). To perform a manual zero, follow the steps below. If your instrument is configured for CO auto zero, then skip this CO manual zero procedure and go to the CO Sensor Span procedure that follows.

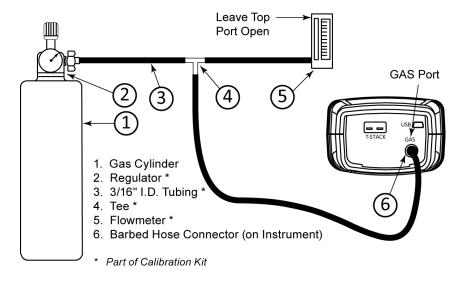

Step	Manual CO Zero Procedure
1	If not already done, turn ON the analyzer and display the Main Menu screen.
2	Use the UP (♠) and DOWN (▼) arrow buttons to select the SETUP menu and press ENTER.
3	From the Setup Menu, use the UP (♠) and DOWN (▼) arrow buttons to select the CO Zero Setting parameter then press ENTER.

#### 5.6.3. CO Sensor Span Procedure

Step	CO Span Procedure	
3	Attach a 500 ppm CO cylinder to the regulator and connect calibration kit components as shown below. Apply 500 ppm carbon monoxide in an air balance calibration gas.	
4	Wait until the Measured reading stabilizes and then press ENTER. The message "Good Calibration" should briefly appear.	
	If the sensor's output is low, but still usable, then the message "Good Calibration WARNING Low Sensor" will appear. The sensor will now be marked as being Low in the Warm-up screen.	
	If the sensor's output is too low to be usable, then the message "Bad Calibration Sensor End of Life, Entry Not Saved" will appear.	
5	Close the regulator and remove the CO cylinder.	

#### 5.7. T-Ref Sensor Calibration

The T-Ref sensor is located inside the instrument. Calibration is done at the factory and should not need to be done in the field.

 $\nabla$   $\nabla$   $\nabla$ 

# Section 6. Troubleshooting

# 6.1. Error and Warning Messages

Message	Description
Low Sensor CO	CO sensor output was low but still usable. Sensor may need to be replaced in the near future.
Low Battery	Battery voltage is low. Replace the batteries.
Applied Value High/Low	An attempt was made to calibrate a sensor outside its range—either above (High) or below (Low) the acceptable range.
Warm-up Sensor Error	<ul> <li>CO sensor was not zeroed at warm-up because of high output. Run instrument on fresh air then restart instrument to re-zero sensor. If the message persists, the CO sensor may need to be replaced.</li> <li>Temperature sensors are measuring temperature outside the range of -4° to 212° F at warm-up. Make sure that the thermocouple is sampling ambient room air within the temperature range at warm-up.</li> <li>Messages will indicate which sensors are in error.</li> </ul>
Set Clock	Time and date values need to be set in the instrument.
xxx	Occurs in the number fields of sensors that have achieved over-range condition.
* * *	Occurs in the number fields of sensors. Replaces in-error sensor values and any calculated values that depend on those sensor values.
	Occurs in the number fields of sensors and indicates that values were not calculated.
Beeping	Slow beep frequency: Replace batteries warning. Fast beep frequency: CO alarm is active and set.

**NOTE:** If a particular sensor is in error during warm-up, the instrument automatically displays the error. The instrument continues to operate with the sensor in error, however information dependent on the sensor in error is not displayed.

# **6.2. Replacement Parts**

Part Number	Description
0204-0004	Battery, AA Alkaline (qty 1)
0024-7265	CO sensor, uncalibrated
0024-1467	B-Smart <sup>®</sup> CO sensor
0019-7110	Replacement probe assembly with water trap
0019-3265	Replacement water trap for probe assembly 0024-7110
0007-1644	Replacement filter element for probe assembly 0024-7110
0024-1579	Replacement End Plate
0024-3073	Replacement Pump Assembly
0024-1620	Battery door/sensor cover
0024-1484	CO Sensor Cap
0024-1458	CO Sensor Base
0019-9370	Instruction manual

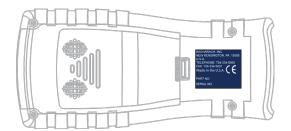

# 6.3. Accessories

Part Number	Optional Accessory
0024-1400	IrDA printer
0024-1310	Printer paper, box of 5 rolls
0021-7006	True Spot <sup>®</sup> Smoke Tester kit
0104-1798	Thermocouple (temperature, air), K-type (1 inch long)
0104-1797	Thermocouple (temperature, stack), K-type (10 feet long)
0024-7059	CO Calibration kit (no gas)
0024-0492	CO calibration gas, 500 ppm CO
0051-1994	CO calibration gas, 100 ppm CO
0024-1470	PC Software Installer CD
0104-4032	USB cable (A to Mini-B)
0024-1461	Boot , rubber
0024-1505	NO <sub>x</sub> filter kit
0024-1504	NOx filter
0024-8555	Optional Appliance Kit for Ambient CO Test
0019-7111	Optional probe assembly with thermocouple

#### 6.4. Instrument Identification

A label on the back of the instrument provides the following information that is useful for service and troubleshooting.

- manufacturer
- country of origin
- certification(s)
- part number
- serial number

#### 6.5. Service Centers

Replacement parts and service can be obtained by contacting one of the following Bacharach Service Centers.
